

Smart Metro Ticket Booking System

IDEATION PHASE

Date

Team ID

Project Name: Smart Metro Ticket Booking System

Maximum Marks: 4 Marks

2. Empathy Map

2.1 Persona

Name: Arjun Mehta

Age: 29

Occupation: Employee at a private firm

Goal: Get to the office on time every day by metro, without losing time at the ticket counter.

2.2 Empathy Map Canvas

Quadrant	Observations
SAYS	"Why is this line so long every single morning?" "I never have exact change for the token machine." "I just want to book my ticket from my phone, the way I book a cab." "This queue is going to make me late for my meeting."
THINKS	"Surely there's a simpler way to handle this by now." "Could I check the fare before I even get to the station?" "I hope the app holds up right when I need it most." "Will this ticket still work if the station's network is patchy?"
DOES	Shows up 10-15 minutes ahead just to absorb the queue time. Waits in line behind other riders. Digs around for cash or a card at the counter. Checks the fare chart on the wall manually. Guards the paper ticket carefully until reaching the destination gate. On some rush-hour days, skips the metro altogether and books a cab instead.
FEELS	Rushed and on edge during peak hours. Worried about missing the train. Relieved on the days the queue is short. Annoyed when the token machine is down. Would feel calm and in control if the whole process could be finished instantly from a phone.

2.3 Pains

- Between 5 and 15 minutes lost daily just standing in line, which adds up fast over a month.
- Chance of missing a train because counter processing is too slow.
- Tokens are easy to lose, drop, or forget, forcing a repurchase.
- No way to check fare, route, or travel time before actually reaching the station.
- A rougher experience for tourists, first-timers, elderly riders, and differently-abled commuters who need extra help that counters don't always provide well.

2.4 Gains (What Success Looks Like)

- Booking a ticket in under a minute, from anywhere, ahead of arriving at the station.
- A fare that's calculated instantly and correctly, with no manual error.
- A QR-based digital ticket that scans straight at the gate — no token required.
- An automatic confirmation notification for peace of mind.
- A dependable, accessible experience for every rider type, including elderly and differently-abled passengers.
- Less crowding at stations overall, making the commute smoother for everyone.

2.5 Insight Summary

What this empathy map makes clear is that the biggest source of frustration for commuters is the time lost to manual, in-person steps and not knowing the fare or queue length in advance. What riders are really after is a quick, self-service way to book and pay before they even reach the station, ideally from their phone. That's a direct argument for a ServiceNow Service Catalog-driven booking flow that automates the fare and hands over an instant QR ticket, cutting the counter out of the picture entirely.
